                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note=Wector: pBluescript SK-; Site 1: EcoRI; Site 2: XhoI; At the trifoliate stage, M. truncatula plants were transplanted to phosphate-free sand and grown for a further 30 days. During this period, they were fertilized twice weekly with 1/2 Hoaglands solutions containing 20um potassium phosphate. cDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using CJNA inserts were excised from the recombinant lambda-Zap cDNA inserts were excised from the recombinant lambda-Zap
